Remanufacturing Exchange Program

FSEG offers a full remanufacturing process for 6.5L diesel engine applications. All injection pumps are fully disassembled and inspected in our ISO / TS16949 driven inspection room. Pumps are then ultrasonically washed, and reassembled to O.E. specifications. After assembly, 100% of the pumps are calibrated with application specific test stands designed to simulate all engine conditions.

Testing software prevents operators from moving on to the next test sequence until adjustments to correct the problem have been made. All test specifications are recorded in Lab View to match and archive all serial numbers to that test result. Pumps are scanned in lots for traceability as well as laser etching serial numbers for identification.

Engine	Year	Customer Part # References	FSEG Order #
GM 6.5L	1994	12550269 or DS45068	5068FS
GM 6.5L	1994-2003	Can include these numbers, DS4-5288, 5459, 5521, 5942, OR 10238969, 12552621, 12561307, 17800077, 12561405, 12558156, 17800114, 19208317, 19208315, 10225930	5521FS
